## Vista SPYDER

- A flexible and scalable solution
- Hi resolution picture-in-picture capabilities
- Seamless edge-blending and border definition
- Display live and pre-recorded feeds simultaneously

The Vista Spyder system has a compact modular design which gives you the versatility and the power to manipulate a virtually limitless variety of inputs onto either a single high resolution output or multiple projectors to create a stunning ultra high resolution widescreen image. Multiple displays can be used to increase the definition of what the audience sees and by utilising the Spyder system to control the multiple displays you achieve a greater brightness, image quality and resolution than previously possible. With MCL's Vista Spyder video processing unit, you are only limited by your own imagination.

Whatever or wherever your event, with our nationwide network of offices we can provide a truly local, national or international solution. Our MCL offices can be found at -
